

**I. LISTING OF THE CLAIMS**

All pending claims are reproduced below. This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A telecommunication infrastructure, comprising:
  - (a) a first electronic device, coupled to the telecommunication infrastructure;
  - (b) a second electronic device, coupled to the infrastructure, for providing a conversation representation; [[and,]]
  - (c) a processing device, coupled to the telecommunication infrastructure and remote to the first device for storing 1) a conversation element associated with the conversation representation and 2) a software program for providing an audible utterance to the first electronic device in response to a selected conversation representation, wherein the processing device can be invoked by a user for dynamic interactive use with a second user of the stored conversation elements, and for text-to-speech conversion for real-time dynamic input with the second user; and
  - (d) a recording device coupled to the second electronic device for audio recording into an utterance data store; and
  - (e) a switchable audio input adapted to allow a user to voice directly into the second electronic device when appropriate.  
wherein the conversation representation is text.
2. (Original) The telecommunication infrastructure of claim 1, wherein the second electronic device generates an in-band signal in response to a conversation representation selection.
3. (Original) The telecommunication infrastructure of claim 1, wherein the second electronic device generates an out-of-band signal in response to a conversation representation selection.
4. (Original) The telecommunication infrastructure of claim 2, wherein the signal is a Dual-Tone Multi Frequency ("DTMF") signal.

5-9 (Cancelled)

10. (Original) The telecommunication infrastructure of claim 1, wherein the first electronic device and second electronic device are mobile telephones.
11. (Original) The telecommunication infrastructure of claim 1, wherein the processing device is a computer coupled to the internet.
12. (Original) The telecommunication infrastructure of claim 1, wherein the processing device is a relay between the first electronic device and the second electronic device.
13. (Original) The telecommunication infrastructure of claim 1, wherein the processing device provides the audible utterance in a conference call.
14. (Original) The telecommunication infrastructure of claim 1, wherein the telecommunication infrastructure includes a wireless telephony application.
15. (Currently Amended) A telecommunication infrastructure, comprising:
- (a) a first electronic device, coupled to the telecommunication infrastructure; [[and,]] a second electronic device, coupled to the infrastructure and remote to the first device for providing a conversation representation, and for storing 1) a conversation element associated with the conversation representation and 2) a software program for providing an audible utterance to the first electronic device in response to a selected conversation representation; wherein the processing device can be invoked by a user for dynamic interactive use with a second user of the stored conversation elements, and for text-to-speech conversion for real-time dynamic input with the second user;
  - (b) a recording device coupled to the second electronic device for audio recording into an utterance data store; and
  - (c) a switchable audio input adapted to allow a user to voice directly into the second electronic device when appropriate.
- wherein the conversation representation is text.
